Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner:  antreyt12

Repository name: ✓

Great repository names are short and memorable. Need inspiration? How about [glowing happiness?](#)

Description (optional)

☒  **Public**
Anyone on the internet can see this repository. You (those who can commit).

☐  **Private**
You choose who can see and commit to this repository.

Initialize this repository with:

☐ Skip this step if you're importing an existing repository.

☒ **Add a README file**
This is where you can write a long description for your project. [Learn more.](#)

Activate Windows
Go to Settings to activate Windows.

Code Issues Pull requests Actions Projects Wiki Security Insights Settings

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH `https://github.com/andreyt12/intro-github-repositorio-1.git`

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# intro-github-repositorio-1" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/andreyt12/intro-github-repositorio-1.git
git push -u origin main
```

...or push an existing repository from the command line

Activate Windows
Go to Settings to activate Windows.
