Arquitectura de Software: Breve introducción

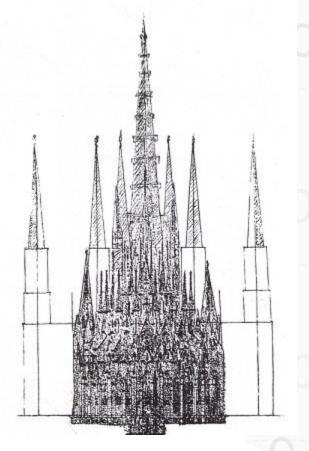

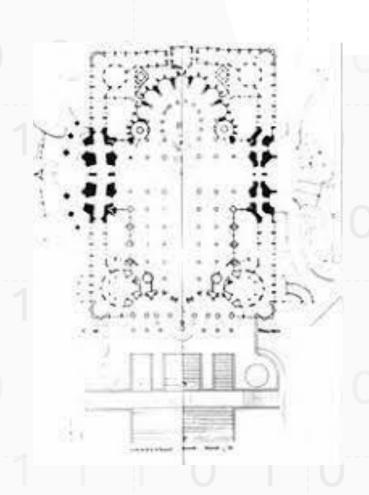

La metáfora de la arquitectura

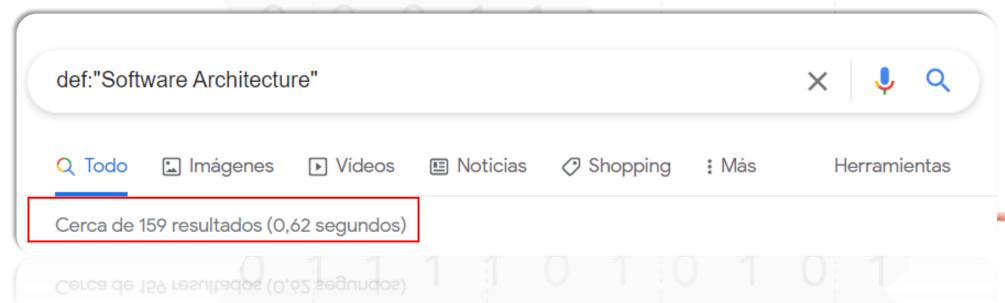

¿Qué es arquitectura de software?

¿Qué es arquitectura de software?

La arquitectura de software de un sistema es el conjunto de estructuras necesarias para razonar acerca del sistema, la cual comprende, elementos de software, las relaciones entre ellos y sus propiedades.

Software Architecture in Practice (Bass, Clements & Kazman, 2013)

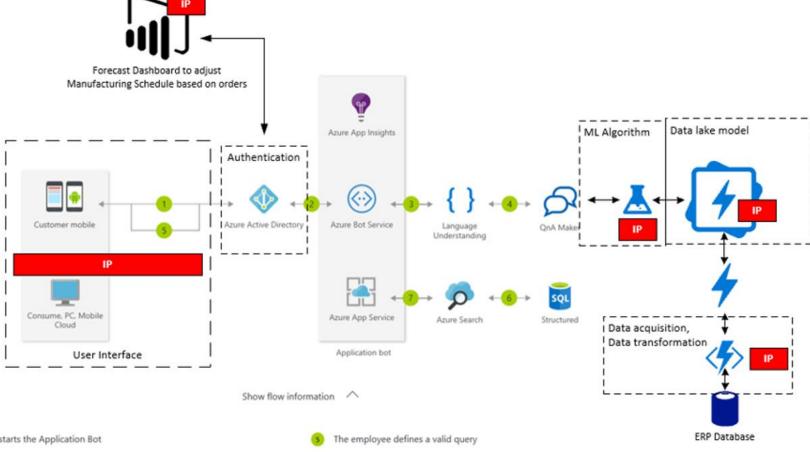

Algunos ejemplos

- Employee starts the Application Bot
- Azure Active Directory validates the employee's identity
- The employee can ask the bot what type of queries are supported
- Cognitive Services returns a FAQ built with the QnA Maker

- The Bot submits the query to Azure Search which returns information about the application data
- Application insights gathers runtime telemetry to help development with Bot performance and usage

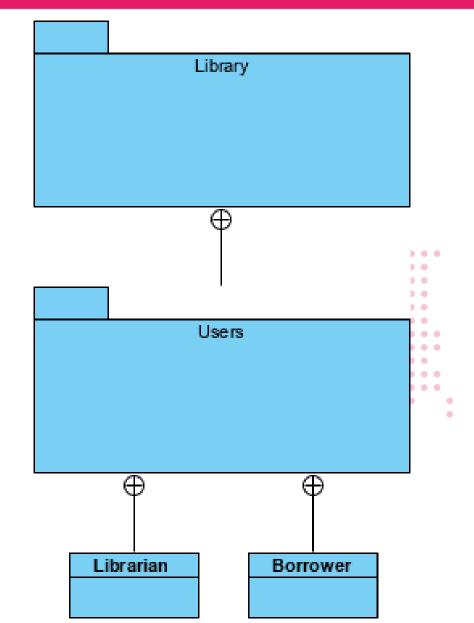

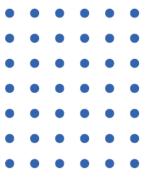

Algunos ejemplos

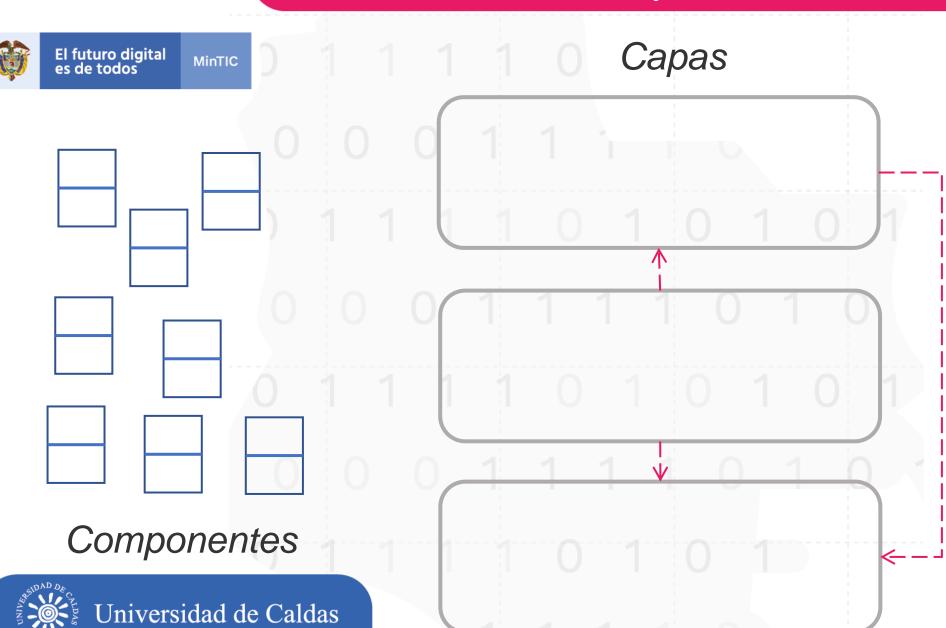

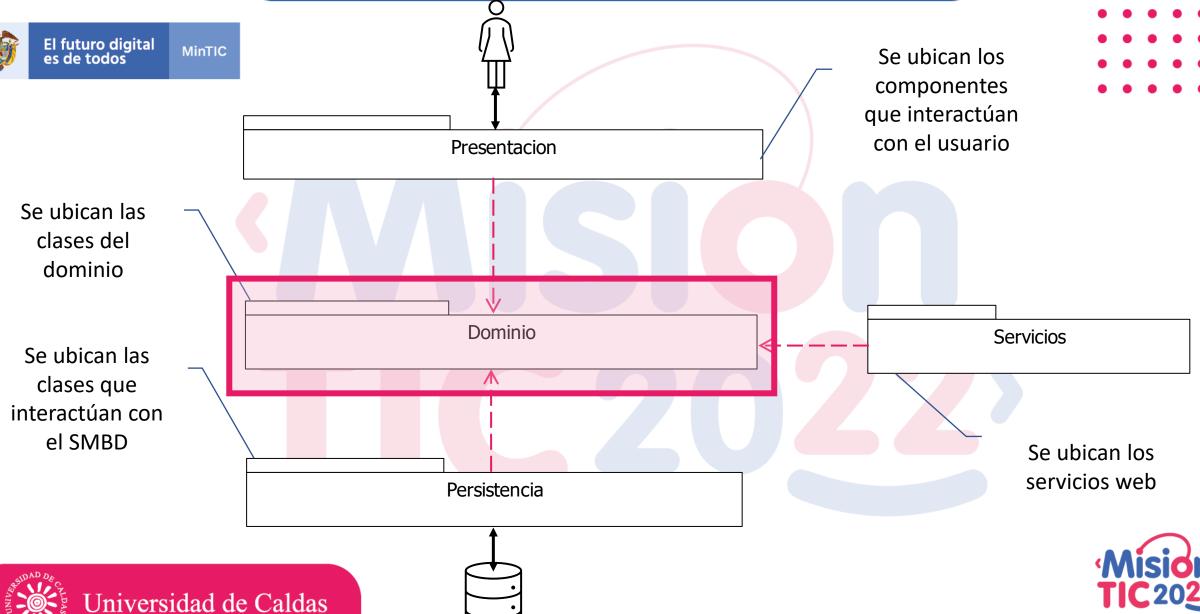

Que es "Arquitectar"

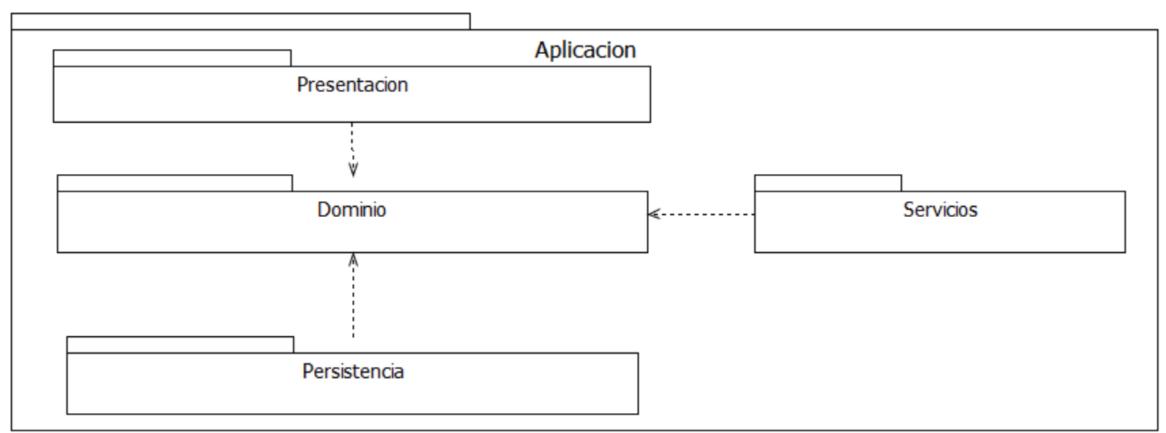

Arquitectura de referencia (Capas)
